I am a Clinical Pathology physician with experience as a resident and Acting Head of Laboratories and Blood Bank. I have extensive experience in laboratory diagnostics, blood banking, quality control, and supervising lab operations.

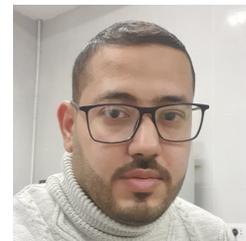

My master's research on Hepatitis B prevalence among blood donors strengthened my analytical and problem-solving skills, complementing my practical experience in ensuring accurate results and patient safety. I am confident that my technical knowledge, attention to detail, and teamwork abilities will add value to your laboratory services.

I would welcome the opportunity to discuss how my experience can benefit your team. Thank you for considering my application.
